

OVERVIEW

Kansas has great renewable energy and energy efficiency potential. The Kansas Corporation Commission (KCC) makes policies that impact current and future energy development. The KCC is currently reviewing rate designs that will impact distributed generation (Docket No. 16-GIME-403-GIE). Public comments will be accepted until 5:00 p.m. on May 26, 2017. By engaging in this docket, YOU can impact the future of energy in Kansas.

WHAT IS DISTRIBUTED GENERATION?

Distributed generation (DG) is the concept that customers can self-produce electricity in small quantities to reduce their monthly utility bills. Small wind turbines or rooftop solar are two examples of DG Systems.

Electricity structures are changing. Traditionally, electricity is generated at large, central power plants far from customers. Distributed Generation allows customers to generate some of their own electricity, respond to prices, reduce demand or store electricity for later use. These changes will continue as the price of solar systems become more affordable.

With less than 700 DG systems across the state - less than 1/10th of 1 percent of electricity generation - Kansas is in a fortunate position to thoughtfully consider rate plans that work for utilities and the customers they serve, while ensuring that the growing solar and small wind industry is protected.

WHY THIS DOCKET MATTERS

KCC decisions impact energy prices. DG customers, utilities, and the growing solar and distributed wind industry deserve to have fair rate plans. A comprehensive and forward thinking investigation on DG would provide the necessary groundwork to plan for the future of electricity regulations in Kansas.

With such a small amount of DG in Kansas, there is time to do this right. The KCC has the opportunity to go beyond the traditional, sometimes confrontational rate-case proceedings by actively engaging stakeholders on the changing electricity models involving Distributed Generation, increased energy efficiency, demand response, electric vehicles and even storage.

TWO POINTS AT ISSUE

Rates now and in the future: In 2015, Westar asked the KCC to significantly change their rate design for residential customers who generate their own energy. To settle the case, Westar and parties, including CEP, agreed and the KCC ordered that these changes would be deferred to a generic docket. The Commission opened this docket to have a “thorough and thoughtful” discussion of the benefits and costs of distributed generation to determine whether a separate rate class for DG customers was necessary and, if so, how it would be structured.

Impacts to DG customers and non DG customers: At issue is what cost impacts, if any, do DG customers have on non-DG customers and if there is a net cost or net benefit to the utility system.

GOOD WORK TAKES TIME

CEP is advocating for an open and transparent process to thoroughly and thoughtfully determine what our energy future should look like.

Rushing the process may have long lasting and unintended consequences including slowing deployment of emerging technology, discouraging innovation, reducing customer control over electricity costs, and disproportionately harming low-use and low-income customers.

As evolving electricity rate-design issues are being discussed across the country, some common themes for good processes are emerging:

1. Good rate design should include transparent, fair, accessible and accountable process.
2. It should be based on credible data and transparent modeling that are publicly available.
3. It should have a good sense of timing (do we need to act immediately because of high penetration or can we take a more measured approach?)
4. Good rate design processes should involve collaboration, even if it takes longer.

Even with low levels of distributed energy resources, the Commission should plan for the future, to have the tools in place when it is ready to put new rates in place. Proactive planning puts the commission (and stakeholders) on a path for a smoother future transition.

WHAT YOU CAN DO

The Kansas Corporation Commission (KCC) needs to hear from Kansans.
Your voice matters!

- ✓ Stay informed! Sign up for Climate + Energy Project's updates (climateandenergy.org)
- ✓ Attend a CEP livestream with DG experts!
Sign up at facebook.com/CEPheartland/
- ✓ Write a Letter to the Editor about Distributed Generation
- ✓ **Submit a comment to the KCC by MAY 26 at 5 pm.**

Online: http://kcc.ks.gov/pi/complaint.cgi?dkt=16-GIME-403-GIE	
Email: public.affairs@kcc.ks.gov	Phone: 1-800-662-0027 or (785) 271-3140
Fax: (785) 271-3111	TDD Kansas Relay Center: (800) 766-3777
Mail: Kansas Corporation Commission, Office of Public Affairs and Consumer Protection, 1500 SW Arrowhead Rd., Topeka, KS 66604-4027.	
<i>Reference Docket No 16-GIME-403-GIE</i>	

The commission hearing will take place on June 27th.
To have the greatest impact, submit comments by May 26th at 5 pm.
